

CUSTOM BUILT ENCLOSURES

INDUSTRIAL GRINDERS

Custom enclosures are among the many options available with a HogZilla grinding system.

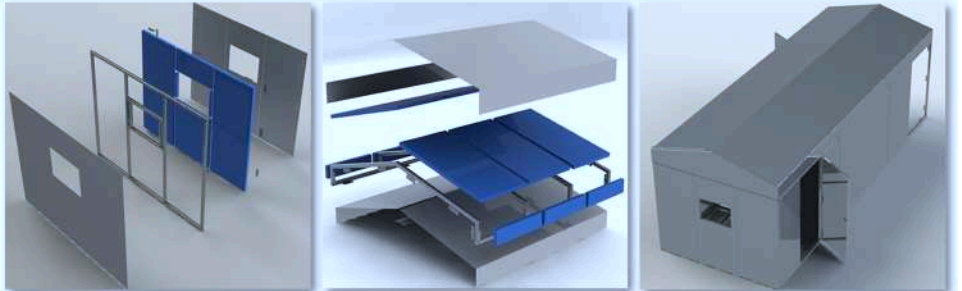

An electric HogZilla grinding system will normally be configured with a remote mounted electric driven hydraulic system, electric motor control panels, and possibly other support items such as an air compressor and an oil cooler. The positioning, layout, and methods of enclosing the remote mounted accessories and equipment can be configured by the customer.

Depending upon the customer's preferences and job site requirements for enclosures, there are many cost saving and operation enhancing options to pick from including the use of existing buildings on the job site, the customization of good used shipping containers, and the use of new enclosures custom made by CW as part of the grinding system.

Available Options Include:

- Custom Dimensions
- Climate Control (AC and/or Heat)
- Insulation
- Interior Wall Liners
- Keyed Door Locks
- Separated Rooms and Compartments
- Added Storage
- Perforated Air Inlet precleaner panels
- HogZilla Color Match Painting
- Grinder Profile Matching
(For enclosures that are to be attached to the grinder.)
- Panelized Modular Construction for easy shipping, handling, and reconfiguration.
