

# HOGZILLA CUSTOM COVERS

In addition to tub guard & tub back stop mechanisms, both new and existing HogZilla grinders are capable of having other custom covers added to them for additional protection in either stationary or movable configurations that can be attached to the machine or freestanding. Custom covers can attend to impact issues, weather exposure issues, dust control issues, & other possible concerns.

CW Mill recommends that owners/operators factor in the availability of custom covers as they develop their safe operation and thrown object hazard policies, procedures, and decisions in regard to setting up and using the machine in their application.

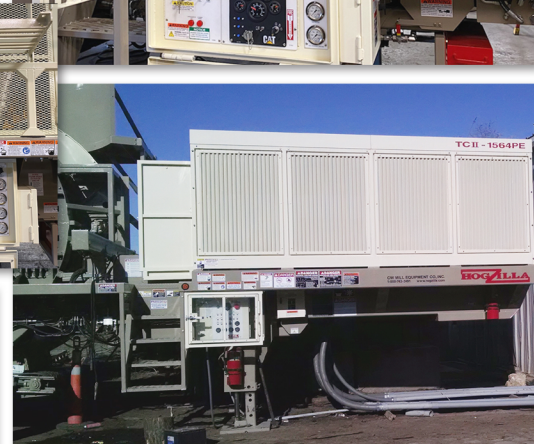

Although additional covers alone will not completely eliminate risks and exposures, additional covers can provide an increased level of protection for people, components, controls, and other chosen items.

CW Mill can help with the design, manufacture, and installation of custom covers in many different uses, sizes, & configurations based on your specific needs, but as with all safety equipment, there are limitations to the amount of safety provided by any cover.

*See separate sales information for details related to customer tub guard and backstop mechanisms.*

**NOTE:** Safe operating efforts to minimize and properly control the possibility of thrown objects and dropped materials will always be required and remain critical along with avoiding & prevention of impact onto people, the machine, components, controls, covers, and other structures or equipment.
